

## Summary of the research

**Search Name: effectiveness of Program educational program for some motor phrases to improve the level Performing some basketball skills.**

**Researcher Name: Dr. Mohamed Ramadan Lotfy**

**Faculty Name : Physical Education for Boys**

**University Name : Banha**

**Search aim:**

- 1. Designing a suggested educational program using kinematic sentences and their effect on improving the level of performance in basketball among the research sample.**
- 2. Identify the effectiveness of the proposed educational program using kinematic sentences to improve the level of performance in basketball among the research sample.**

**Research Sample and Characteristics:**

- The researcher used the descriptive method in the survey method to determine the complex skills in basketball.**
- The researcher used the experimental method using pre and post measurement for two groups, one is experimental and the other is control, due to its relevance to the nature and procedures of the research.**

**The most important results:**

- • There were significant differences between the two dimensional measurements of the control and experimental groups in the improvement of the level of skill performance in basketball in favor of the post measurement.**
- There were significant differences between the two dimensional measurements of the experimental and control groups in the improvement of the level of skill performance in basketball in favor of the post-measurement of the experimental group.**
